

Prompt History Analysis

Task Puncher - prompt_history.csv + prompt_history_2.csv

Span: 2026-05-30 to 2026-06-07 - 8 days - 11 sessions - generated 2026-06-07

97 Total records	92 Real prompts	5 (5.2%) Tooling noise	11 Sessions
----------------------------	---------------------------	----------------------------------	-----------------------

Note: 5 records are not real prompts (1 task-notification block + 4 ultraplan CLI echoes captured by the logging hook). That is a logging bug to fix, not user behavior. Percentages below are computed over the 92 real prompts.

Category Breakdown

Session Management		23 (25.0%)
Git / PR / Version Control		17 (18.5%)
Workflow & Task Navigation		14 (15.2%)
Agentic Automation & Hooks		11 (12.0%)
Feature & UI Development		6 (6.5%)
Meta / Config / Documentation		6 (6.5%)
Learning & Clarifying Questions		6 (6.5%)
Debugging & Bug Fixes		5 (5.4%)
Planning & Prioritization		4 (4.3%)

Findings & Tips by Category

Session Management - 23 (25.0%)

- SessionStart hook (shipped) already kills 'read whats_up' opens - keep leaning on it.

- Add a se

Git / PR / Version Control - 17 (18.5%)

- Conflicts (4 prompts) cluster on long-lived branches - merge each TP branch same-day.

- Keep co

Workflow & Task Navigation - 14 (15.2%)

- Ask once for the ordered next 3 tasks, then 'do all three' - fewer round-trips.

- Keep PL

Agentic Automation & Hooks - 11 (12.0%)

- Capture the 'local code-review, key off GitHub' setup once - it recurs.

- State trig

Feature & UI Development - 6 (6.5%)

- Pair the vibe ('shiny loud') with a spec: size, color token, max items.

- Keep bu

Meta / Config / Documentation - 6 (6.5%)

- Keep CLAUDE.md lean; push procedural detail into hooks - shrinks the session tax.

Learning & Clarifying Questions - 6 (6.5%)

- Move recurring answers (DB location, dev.ps1, swap-DB) into CLAUDE.md as reference.

Debugging & Bug Fixes - 5 (5.4%)

- Most trace to 'frontend up before backend' - dev.ps1 + health-check wait fixes the class.

- Report th

Planning & Prioritization - 4 (4.3%)

- Re-run a short 're-prioritize the backlog' prompt at each session start.

Top 3 Takeaways

1. Automate the 25% session tax - SessionStart hook (done) + a session-end hook reclaims most of it.
2. Tame branch conflicts - merge/rebase TP branches same-day; rebase on origin/main before PR.
3. Clean the log - filter 'read...', 'end session', and CLI/agent echoes out of prompt_history.csv.
